甚麼是游離基？

遺傳基因控制著人類身體的成長、健康及其他重要的生理過程。但基因一旦受破壞，人體便會開始退化，健康問題接二連三慢慢出現。遺傳基因會受輻射及致癌物質等眾多因素影響，當中亦包括「游離基」。

游離基在生理過程中扮演著重要的角色。這些生理過程對生命十分重要，例如：白血球噬菌細胞會產生游離基來殺死細菌。氫氧基及超氧化物是其中兩種最重要的游離基。但是，因它們的反應活性很高，所以也會對身體細胞造成傷害。因游離基會對細胞基因(DNA)產生反應，過多游離基積聚會令細胞受損及死亡，嚴重情況更會引致疾病，如：癌症、中風、心肌梗塞、糖尿病及器官失調症等。

甚麼因素引致游離基在體內累積？

身體的新陳代謝會正常地產生氧化壓力，形成游離基。免疫系統會在消滅細菌及病毒時製造游離基。環境及生活習慣因素亦是游離基產生的原因之一，例如：環境污染、輻射、農藥及吸煙，都會令身體中的游離基水平上升。

在正常情況下，身體會自行調整游離基的水平。但如果體內的抗氧化物不足，或游離基的產生過程太快，身體便不能有效地處理游離基，最終可能令身體受損。年紀愈大，身體受游離基破壞的程度亦會愈大。

游離基積聚會造成甚麼問題？

當游離基接近身體內的細胞份子時，會搶走細胞份子的電子，從而令自己得到穩定。但這個過程同時會令細胞分子受到破壞，引致一連串連鎖反應，令基因（DNA）受損。

當基因受到損害，會影響細胞分裂及新細胞形成，最終整個細胞的功能都會受影響。這個過程會令基因遺傳訊息傳遞錯誤，導致癌症出現。游離基其他的影響包括：

- 傷害心血管系統
- 削弱免疫系統
- 影響皮膚及內臟，破壞膠原蛋白結構
- 傷害腦部及減弱認知能力
- 加速老化

怎樣中和游離基？

抗氧化物是能夠抑制游離基的物質，它們可以保護身體免受氧化傷害。蔬菜及水果含有豐富的抗氧化物，一些市面上的營養補充物都可為身體提供顯著的抗氧化營養素。有效及素質好的抗氧化營養補充物可令身體內多種的抗氧化物質同時發揮出協同作用，把抗氧化能力達至最佳水平。

WHAT IS FREE RADICAL?

Genetic information controls our body growth, health and other important biological processes. However, if the genetic information is altered or mutated, our body will progressively degenerate. Many health problems will arise. Genetic information is affected by radiation, carcinogens and other inevitable factors including the interference of “free radicals”.

Free radicals play an important role in a number of biological processes. Some of these are necessary for life, such as the intracellular killing process of bacteria by using phagocytic cells. The two most important oxygen-centered free radicals are superoxide and hydroxyl radical. However, due to their reactivity, these free radicals can participate in unwanted side reactions resulting in cell damage. Excessive amounts of these free radicals can lead to cell injury and death, which may contribute to many diseases such as inflammation, cancer, stroke, myocardial infarction, diabetes and major disorders due to the result of reactions between free radicals and DNA.

WHAT FACTORS CAUSE FREE RADICALS TO BUILD UP IN OUR BODY?

Free radicals arise during normal metabolism. Sometimes the body's immune system purposely create them to neutralize viruses and bacteria. However, environmental factors, such as pollution, radiation, cigarette smoke and herbicides can also produce free radicals.

Normally, the body can handle free radicals, but if antioxidants are unavailable, or if the free-radical production becomes excessive, damage can occur. Of particular importance, free radical damage can accumulate with age.

WHAT WILL HAPPEN WHEN FREE RADICALS ACCUMULATE IN THE BODY?

When free radicals get near other molecules in the body, they grab an electron to make themselves stable. This stealing of electrons causes damage in the molecules they come in contact with, and creates damage to DNA.

When DNA is damaged, it affects the function of cells when they reproduce. This process can lead to cancer which is essentially cells dividing with bad DNA encoding. Free radicals can also lead to the following problems:

- Damage to your Cardiovascular System

- Damage to your Immune System

- Damage to Skin and Organs Through Collagen Cross Linking

- Damage to your Brain and Cognitive Functions

- Speed Up Aging

HOW TO GET RID OF FREE RADICALS?

Substances which are able to counteract free radicals are called antioxidants. They can quench free radicals and protect our body against the oxidizing damage and harmful effects. Common sources of antioxidants include vegetables, fruits and nutrient supplements. A good and potent antioxidant supplement should work synergistically with other antioxidants in the body.

WHAT IS PYCNOGENOL® ?

Pycnogenol® is the brand name for a premium herbal supplement ingredient extracted from the bark of the French Maritime Pine Tree. WHAT IS ORAC?

ORAC, stand for Oxygen Radical Absorbance Capacity, is a test tube analysis that measures the total antioxidant power of foods and other chemical substances.

Many studies shared that eating plenty of high-ORAC foods, such as Acai, spinach and blueberries could:

- Help slow the processes associated with aging in both body and brain
- Help raise the antioxidant power of human blood 10% to 25%
- Prevent some loss of long-term memory and learning ability
- Help maintain the ability of brain cells to respond to a chemical stimulus
